

RFID Asset Inventory Starter Kit

Includes all the components necessary to implement a fixed asset inventory solution including on-site tag analysis services.

This kit is designed to quickly get you up and running with a pilot system, allowing you to start the process of tagging and inventorying assets within 1 day. The included RFID tags and on-site tag analysis service help ensure the critical process of evaluating which type(s) of RFID tags work best for your various types of assets is successful. Once the optimal tags for you assets have been identified, the only thing left to move beyond the pilot and fully implement, is to order RFID tags and attach them to your assets.

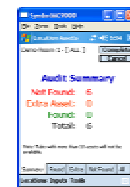

Unlike barcode asset tags, there is no one size fits all passive RFID tag that will work with every type of asset. There are dozens of different types and sizes of RFID tags that work differently on different types of assets. It is very important to carefully select tags that will work optimally

with your assets. The last thing you want to do is order 1000's of tags that end up not providing the read ranges you were hoping for. We have therefore included in this kit, an on-site tag analysis service that will provide the necessary testing and evaluation of tags on your assets in your environment to determine which tags will work best. This allows you to try a number of different tags on your assets prior to placing you tag order.

Designed for Physical Inventories of

- IT Equipment
- Capital Assets
- Telecommunications Equipment
- Government Furnished Property
- Medical Equipment
- Files and documents
- Many other types of assets

Partners

Kit Includes

- ☐ RFTTrack.NET Server - Inventory Module
 - ☐ RFTTrack.NET Mobile Edition
 - ☐ First year software maintenance & support
 - ☐ Motorola MC9090-G handheld RFID reader
 - ☐ Charging cradle, power supply & cables
 - ☐ Spare battery and stylus pack
 - ☐ Motorola 1 year Bronze Service Plan
 - ☐ Durable RFID Asset Tag Sample Pack
 - ☐ On-site Professional Services
 - ☐ Software implementation and training
 - ☐ Pathfinder Assessment (Tag analysis)
- * Travel, shipping, and taxes not included

Scanning Options

- ☐ Passive RFID (UHF)
- ☐ Barcode
- ☐ DoD UID 2-D Data Matrix

Optional Add-Ons

- ☐ Pre-installed on a Dell laptop or server
- ☐ Additional readers or tags
- ☐ RFTTrack.NET Monitoring Module
 - ☐ Real-time asset monitoring
 - ☐ Asset Security
 - ☐ Active RFID

RFID asset inventory benefits

- ☐ Lower costs by reducing labor and administration
- ☐ Improve accuracy by eliminating reliance on manual input
- ☐ Streamline operations by enabling process improvements
- ☐ "Closed-loop" asset tracking improves short-term ROI
- ☐ Improve asset utilization and visibility
